

LG Granules

Premium Soft Wood Pellets

LG Granules, which are manufactured in Quebec Canada, are a combination of top quality Black Spruce and Grey Pine which are known for their superior heating value. LG's have a high heat quality, low moisture content and ash level of below 0.38%.

LG Granules uses independent test labs to account for their quality control and the pellet heat, moisture and ash levels which are available for you to review.

Heat Value: 8,347 BTU/lb

Moisture content at less than one percent by weight.

Ash content of 0.38 by weight, with the PFI premium standard at less than one percent by weight.

Cleanfire, are distributed by American Biomass Distribution and are manufactured in British Columbia, Canada.

Cleanfire

Premium Soft Wood Pellets

Cleanfire pellets exceed the Pellet Fuel Institute's premium grade standards and are made from almost exclusively pine Whitewood with portions of White Fir at times.

Cleanfire pellets burn very clean. They have low ash, low dust, and high energy burning characteristics. They also have a faint, distinctive enjoyable fragrance.

Comments from consumers who are burning these pellets have been very positive.

Heat Value: 8,370 BTU/lb

Moisture content: less than one percent by weight

Ash content: 0.035%
